HASHMAT IBRAHIMI

Software Engineer | Backend, Distributed Systems & Full Stack

New York, NY | 516-322-8400 | Hashmat.ibrahimi.21@gmail.com | linkedin.com/in/hashmat-ibrahimi | github.com/hibrahi000 | hibrahi000.github.io

PROFESSIONAL SUMMARY

Software Engineer with **7+ years of experience** building high-scale backend services, distributed systems, and core platform tooling across **Node.js, TypeScript, Java/Spring Boot, and Federated GraphQL (Apollo Federation)**. Proven track record of designing platform-standard validation scalars and automated testing utilities adopted by **8+ engineering teams at American Express** on Tier 0 systems serving millions of users. Experienced in database and API performance optimization—cutting API response latency by **70% (800ms to 240ms)** at BAE Systems—and executing zero-downtime monolith-to-microservices migrations maintaining **99.9% availability**.

TECHNICAL SKILLS

Languages & Frameworks: Node.js, TypeScript, Java, Spring Boot, Spring Batch, Express.js, Hapi.js, Python, FastAPI, JavaScript (ES6+), React, Redux

Backend & Architecture: Microservices, Distributed Systems, GraphQL (Apollo Federation), RESTful APIs, API Gateway Patterns, Event-Driven Architecture, Schema Design, System Design

Databases & ORMs: PostgreSQL, MySQL, MongoDB, DB2, SQL Query Performance Tuning, Indexing & Batching, Data Modeling, Prisma ORM, SQLAlchemy

Testing, CI/CD & DevOps: Jest, JUnit, Pytest, Test-Driven Development (TDD), Integration & Snapshot Testing, Selenium WebDriver, Docker, GitHub Actions, Jenkins, Git, CI/CD Pipelines

Security & Observability: OAuth 2.0, JWT Authentication, Input Validation, Secure Coding (KYC Compliance), Splunk (Log Aggregation, Monitoring & Alerting), OpenAPI/Swagger, Postman, Agile/Scrum

PROFESSIONAL EXPERIENCE

American Express — New York, NY

Software Engineer — **Aug 2022 - Jan 2026**

- Architected and implemented a custom GraphQL scalar in **JavaScript (ES5/ES6+), Node.js, and Apollo Federation** for ISO 3166-1 country and subdivision validation on a core customer subgraph; eliminated address mutation data integrity vulnerabilities and established a platform-wide standard adopted by **8+ federated engineering teams** to support international KYC compliance across the UK, India, and France.
- Engineered a reusable **Java and Spring Boot** snapshot test filtering utility using Jackson for recursive schema traversal and wildcard/path-based field exclusion; eliminated regression test pollution during active patch cycles and improved **CI/CD pipeline reliability across 8+ microservices teams**.
- Accelerated a platform migration from a legacy **Node.js/TypeScript GraphQL monolith to Java/Spring Boot federated microservices** as a **top-3 code contributor**, retiring legacy code across customer profile and card issuance domains while maintaining **99.9% availability (zero downtime)**.
- Diagnosed and resolved a mission-critical distributed graph defect where subgraph type-mapping mismatches caused valid mutations to return null queries, preventing cascading failures across the Tier 0 federated platform prior to production release.
- Refactored GraphQL resolvers, schema contracts, and data mutations to align with customer-centric data access patterns during an account-to-customer architecture evolution; partnered with SRE, Product, and Architecture teams to monitor **Splunk telemetry** and execute seamless E3 production deployments.
- Designed automated end-to-end regression and UI verification suites using **Java, JUnit, and Selenium WebDriver**, establishing release verification standards for Tier 0 financial applications.
- Served as primary domain resource for cross-functional engineers on GraphQL query optimization, Node.js debugging, and subgraph architecture; authored shared Postman collections and operational runbooks that reduced onboarding ramp time.

BAE Systems — New York, NY

Full Stack Developer — **Jul 2021 - Aug 2022**

- Optimized backend API response times by **70% (reducing average latency from 800ms to 240ms)** by diagnosing and eliminating N+1 query patterns in **PostgreSQL** candidate status lookups, implementing batch SQL queries, and refactoring **Node.js and Express.js** route handlers.
- Assumed full ownership of critical backend APIs within two weeks of onboarding following a senior engineer departure; stabilized **Hapi.js, Express.js, TypeScript, and React/Redux** services handling resume processing, security clearance verification, and candidate matching for a military job portal serving **1M+ active users**.
- Standardized RESTful API documentation across all endpoints using **Swagger/OpenAPI**, hardened document upload pipelines with **OAuth 2.0 and JWT authentication**, and implemented structured error handling that reduced production incident tickets by **over 30%**.

Wells Fargo — **New York, NY**

Software Engineer Associate — **Jul 2020 - Jul 2021**

- Executed backend migration workflows transitioning legacy mainframe COBOL batch processing pipelines to modern **Java, Spring Boot, Spring Batch, and DB2 microservices**, supporting reliable processing across **1M+ customer accounts and 500K+ daily financial transactions**.
- Created internal codebase onboarding tools and architectural runbooks in an Agile/Scrum environment, reducing new-hire engineer ramp-up time and eliminating cross-team knowledge silos.

StrongArm Technologies — **Brooklyn, NY**

Software Engineer Intern — **Jan 2020 - Jun 2020**

- Developed a **Python and SQLAlchemy** backend engine for an enterprise IoT worker safety posture-tracking dashboard deployed across a Walmart partnership supporting 50+ operations managers and **10,000+ active industrial workers**.
- Designed scalable **RESTful APIs and PostgreSQL** data models for high-throughput IoT sensor data ingestion and real-time streaming posture analytics.
- Automated build, test, and deployment workflows by building **CI/CD pipelines with Docker and Pytest**, cutting deployment time by **60%** and reducing QA overhead by **35%**.

ABH Pharma — **Brentwood, NY**

Contract Web Developer — **Jan 2019 - Jun 2019**

- Built and deployed a full-stack **MERN (MongoDB, Express.js, React, Node.js)** inventory management platform that replaced shared Excel workflows for **20+ operations employees**, centralizing supplement inventory data and eliminating version-control discrepancies.
- Engineered an automated data ingestion pipeline converting raw Excel spreadsheets into structured JSON documents stored in **MongoDB**, eliminating manual data entry errors.

PROJECTS

FitCheck — AI-Driven Apparel Fit Engine (github.com/hibrahi000/fitcheck) — **New York, NY**

Full-Stack & Backend Engineer — **2025 - Present**

- Built a cross-platform mobile and backend sizing system using **React Native (Expo), Node.js, TypeScript, Prisma ORM, and PostgreSQL**, paired with an asynchronous **Python and FastAPI microservice** executing **Tesseract OCR and OpenAI Vision API** analysis to extract structured garment sizing metrics and generate personalized size recommendations.

EDUCATION

City University of New York, Lehman College — **New York, NY**

Bachelor of Science in Computer Science (Magna Cum Laude) — **Graduated**
